

Bluetooth® technology allows you to make and receive phone calls from your cell phone by using controls on your steering wheel. You can talk without holding your cell phone, and you can hear the other caller through the vehicle's audio system.

This can be accomplished by connecting a cell phone that has a compatible Bluetooth® feature with a vehicle equipped with an optional Bluetooth® feature. This connection or "pairing" allows a phone to be connected to the vehicle for hands-free operation without any wires or adapters. Pairing is accomplished by operating the pairing feature on the vehicle and then the pairing feature on the cell phone.

Please go to the Bluetooth® Phone section of lexus.com to:

- Find out if your vehicle has Bluetooth® compatibility
- Find out if a Bluetooth® phone you already have is compatible with your Lexus vehicle
- Find out which new Bluetooth® phones are compatible with your Lexus vehicle
- Find detailed instructions on how to pair a compatible Bluetooth® phone to a Lexus vehicle

See Lexus Knowledge Center Disclaimers.
