

2008 LEXUS LS Technology

Optional equipment shown.

FORWARD. REVERSE. AND NOW PARALLEL. Push a button, let go of the wheel, and watch your Lexus park. The available Advanced Parking Guidance System¹ masters parallel parking through a sonar and computer system, requiring only the slightest of braking from the driver, to glide the Lexus LS into any appropriately sized parking space.

FORECAST: SUBLIME. For optimal comfort, the LS uses an available infrared sensor to determine body temperatures for the rear-seat passengers, then adjusts the heating and cooling to predetermined temperature settings.

¹See page 14 for more information.
