

2008 LEXUS **LS Hybrid** Technology (Continued)

UNPARALLELED PARKING GUIDANCE. Having a car that virtually parallel parks itself may just be the ultimate luxury. Just one touch of a button activates the available Advanced Parking Guidance System's² sonar and, with just a little brake work, your LS 600h L will ease itself into the designated parking spot. That's not the only technological marvel that the LS 600h L has to offer. An available infrared sensor monitors the body temperatures of the rear-seat passengers and adjusts their climate zone to a predetermined temperature. In keeping with the ecologically advanced spirit, the LS 600h L is equipped with the world's first LED headlamps for low-beam use, which last longer than conventional halogen bulbs.

²See page 16 for more information.
