

2008 LEXUS **LS Hybrid** Performance

PERFORMANCE THAT'S SIMPLY ELECTRIFYING. Despite the LS 600h L's quiet cabin, its power is anything but restrained. This is a result of the world's first hybrid V8 engine, which produces a combined system output of 438 horsepower¹ while producing substantially fewer emissions. That's why it's certified as a Super Ultra-Low Emission Vehicle (SULEV) with nearly 70 percent fewer emissions than the average new vehicle⁴. The Electronically controlled Continuously Variable Transmission (ECVT) allows the engine and motor to operate at peak efficiency, regardless of the vehicle's speed. And because it seamlessly distributes gas and electric power according to driving conditions, the ECVT aids in providing smooth acceleration and increased fuel efficiency. The LS 600h L also features full-time all-wheel drive (AWD) to help improve traction and control.

¹⁴See page 16 for more information.
